Enterprise Risk Management

Risk Management is a relatively simple process that uses a familiar set of steps similar to the design process one is familiar with to analyse, assess and manage risk. The training module is structured around the International Standards Organization standards 31000 for Risk Management and 31010 for Risk Assessment. The module examines the individual components of an Enterprise Risk Management system, look at the way these can be put together into a framework, and how the framework can be used.

Contents

1. Introduction to FIDIC
2. Introduction
   - 2.1. Background
   - 2.2. Why does one want to manage risk?
   - 2.3. What is the framework we need to set up successful Risk Management?
     - 2.3. 1. Introduction
     - 2.3. 2. Top management commitment
     - 2.3.3. Design the framework
     - 2.3.4. Monitor, review and improvement
   - 2.4. The working framework of a Risk Management system.
   - 2.5. What makes Risk Management work?
3. Reasons for Risk Management
   - 3.1. Introduction
   - 3.2. Integrated into day-to-day operations
   - 3.3. Benefits
   - 3.4. Inputs to Risk Management
4. Overview of ISO 31000
   - 4.1. Introduction
   - 4.2. Environment and types of risk
   - 4.3. Risk Management process
   - 4.4. Risk assessment
   - 4.5. Risk treatment
5. Definition of risk
   - 5.1. Introduction
   - 5.2. Nature of risk
   - 5.3. Quantitative and qualitative risk
     - 5.3.1. Introduction
     - 5.3.2. Key inputs – quantitative risk assessment
     - 5.3.3. Key inputs - qualitative risk assessment
   - 5.4. Action plans
6. Enterprise Risk Management
   - 6.1. Introduction
   - 6.2. Understanding the context
   - 6.3. Other requirements
     - 6.3.1. Continuous review and assessment
     - 6.3.2. Communication

- 6.3.3. Quality of information
- 6.3.4. Quantitative versus qualitative risk assessment
- 6.4. Areas of application
  - 6.4.1. Introduction
  - 6.4.2. Risk management hierarchy

7. Risk Management documents and definitions
   - 7.1. Standards
   - 7.2. Definitions
   - 7.3. Guides
   - 7.4. FIDIC documents
8. ISO Risk Management principles
   - 8.1. Risk Management process
   - 8.2. Likelihood and consequences
   - 8.3. Enterprise risk matrix
9. Preparing to develop an ERM framework
   - 9.1. Issues and criteria
     - 9.1.1. Data capture
     - 9.1.2. Data value
   - 9.2. Establishing the context
     - 9.2.1. The ability to control risk
     - 9.2.2. Residual risk
     - 9.2.3. Retained risk
     - 9.2.4. Safety in design
     - 9.2.5. Resourcing
     - 9.2.6. Integration
     - 9.2.7. Accountability
     - 9.2.8. Communication and reporting
     - 9.2.9. Alignment of regulatory requirements
   - 9.3. Criteria and associated measures – establishing the risk appetite
10. Development and implementation of the ERM framework
    - 10.1 Establishing the context
    - 10.2. Mandate and commitment
    - 10.3. Roles and responsibilities
    - 10.4. Designing the framework
11. Risk assessment – tools that can be used
    - 11.1. Searching for risks
    - 11.2. Assessment tools
      - 11.2.1. Structured what-if analysis (SWIFT)
      - 11.2.2. Scenario Analysis
      - 11.2.3. Business Impact Analysis
      - 11.2.4. Fault Tree Analysis
      - 11.2.5. Event Tree Analysis
      - 11.2.6. Failure Mode and Effect Analysis (FMEA)
      - 11.2.7. Layers of Protection Analysis

11.2.8. Bow Tie Analysis
11.2.9. Operations research techniques
11.2.10. Other tools
12. Consequences: evaluation and communication
12.1. Introduction
12.2. Principle of consistent crudity
12.3. Risk matrices
12.4. Heat diagrams
12.5. Quantitative risk assessment
12.6. The Risk Register
13. Risk Management in consulting engineering assignments
13.1. Introduction
13.2. The Client
13.3. The fee
13.4. Definition of scope
13.5. Resources
13.6. Agreements
14. Professional liability and insurance
14.1. Types of insurance
14.1.1. General Liability Insurance
14. 1.2. Professional Indemnity Insurance
14.2. Limitation of liability
14.2.1. Introduction
14.2.2. Recommendations
14.3. Project Liability Insurance
14.4. Joint and several liability
14.4.1. Introduction
14.4.2. Recommendations
14.5. Financial caps
14.5.1. Introduction
14.5.2. PI insurance versus financial caps
14.5.3. Third party claims
14.6. Exclusion of joint and several liability
14.6.1. Introduction
14.6.2. Recommendations
