

Developing New Skills

Workshop 9

Coordinator : Eigil Pedersen

Past President of FIDIC

Making Better Use of Available Resources

To day's workshops have been dealing with opportunities, challenges and solutions in three parallel streams.

We are to deal with the third part of stream 3, that is:
to find practical solutions to the quest for developing new skills

A Fact

People are the critical ingredient to development

There is a worldwide shortage of skilled people

Better use of available resources is imperative

The Presentations

Will try to give a picture of the situation in different environments

Will provide you with a basis for discussing the challenges posed as well as possible solutions

Questions to be answered

1. What are the ideal working relationships between developed and developing industries?
2. How can clients and funding agencies recognize and offer realistic support for local resources?
3. What impact will this have on procurement and funding policies?
4. How is FIDIC influencing capacity building programmes with members?
