## THE YOUNG PROFESSIONAL MANAGEMENT TRAINING PROGRAM

BY: AWAB ELAMEER

The FIDIC Young Professional Management Training Program (YPMTP) is an intensive training programme with the aim to develop management skills to the Young Professionals working in consulting engineering firms, the skills which are the real needs for future leaders of the consulting engineering industry.

it was my first online training I ever had, at the beginning i wasn't sure how much i will benefit from the course and how the program will be conducted, but now i consider it the most beneficial training i ever had.

My motivation for taking the YPMTP and applying for the BST Global Young Professional Scholarship Award is knowing that Studying with FIDIC is beyond question a first-class boarding pass in accessing genuine global knowledge and the very spectacular international experiences, I have been extremely fortunate to be awarded the Scholarship Award which gives opportunities to Engineers from less developed countries to be part from such a great program.

The program is part of the FIDIC role and Objective to promote and encourage the development of Young Professionals in the Consulting Engineering Industry, It is very obvious that FIDIC Training Department and the program coordinator Mr. Steen Frederiksen have put great effort in designing the course contents and structure to suit the need of young consulting engineers.

I am very pleased with my training and the experience I have had in the program through the online sessions and the 5 days conference sessions. The classes was informative, engaging and really fun too! The knowledge of the instructor seems endless and their will to share their work life experience to the young professional is unlimited, also The course offered valuable hands-on experience. There were a diversity of topics that provided participants with the skills needed for the consulting industry.

## THE YOUNG PROFESSIONAL MANAGEMENT TRAINING PROGRAM

The course topic's covers many areas that fill the needs of young consulting engineers which includes but not limited to; Organization start, business development, financial management, HR management, risk management, sustainable development, business integrity and many other topics

We spent more the 50 hours of online sessions, case studies and responding interactively with the topics questions using the podio platform in addition to the wonderful five days classes and sessions as part of the FIDIC International Infrastructure Conference in Marra-kech, Morocco, We had Student representations from more than 15 countries which makes it truly international experience

The chance to meet and interact with people from all over the world is rare chance to experience different knowledge and ideas from different backgrounds and perspectives, I made great friends and shared really great time inside and outside the classes. also one of the greatest opportunities this program offered me is that I became part of the FIDIC family through the YP Forum which I have been introduced to their activities during the conference.

Also presenting our vision as a young professionals to the consulting industry leaders at the future leaders workshop at the FIDIC International Infrastructure conferences was a great opportunity to express how we expect and hope the future to be as young professionals and transfer this message to the industry.

I would definitely recommend the YPMTP program to any Engineers who is planning to be part of the industry future leaders.
